• e-Commerce • Business Software • Customer Management

LINKING YOUR BUSINESS TOGETHER

The web based architecture uses the internet to link geographically spread out operations and employees together. It allows you to connect your operations in different locations to a single server. You can access your business system anywhere, anytime through standard web browser.

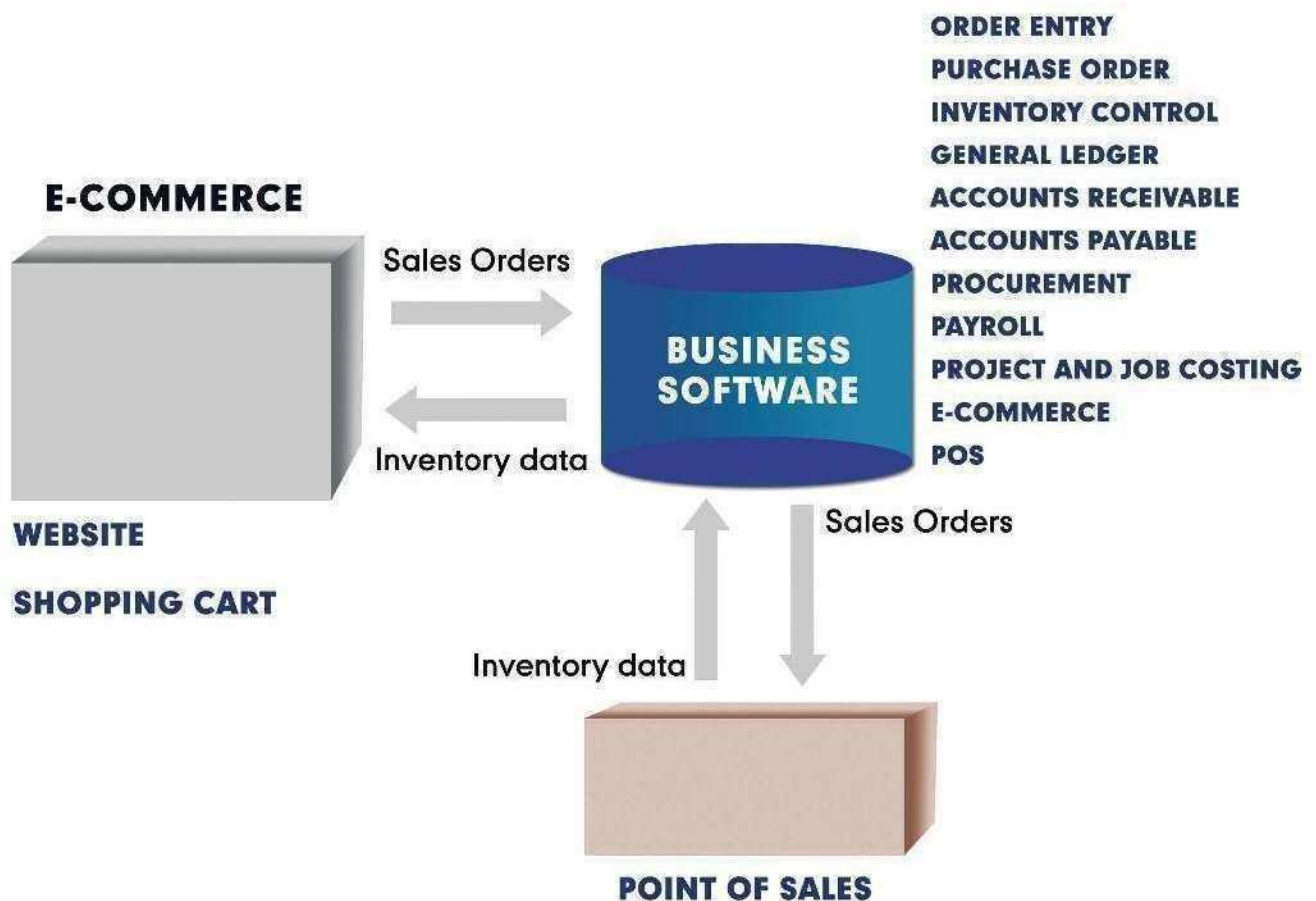

COMPLETE INSIGHT AND CONTROL OF YOUR BUSINESS

SparrowPro's fully integrated business applications means you need to enter your data once and the data will be available to all immediately throughout the system. The availability of immediate and comprehensive information on all aspects of your business provides you with complete insight and control of your business.

DESIGN FOR GROWTH AND FLEXIBILITY

SparrowPro's license is never ending and does not place any limit on the number of concurrent users. You can add more users to the system freely as your business grows. The software is modular in nature and can be easily customized to adapt to your changing business operation. It runs on both linux and windows operating system. The SQL database server manages your ever growing volume of data with ease.

FULLY INTEGRATED BUSINESS MANAGEMENT APPLICATIONS

SparrowPro provides a complete suite of business applications that automate all your business processes.

ORDER ENTRY

Order Entry module handles order entry, confirmation, shipment and sales return of both inventory items and non-inventory, third party products. It prints out inventory pick lists, packing lists, delivery orders and invoices. Customer price history is automatically recorded by the module and you have a choice of using the last price quoted to a particular customer or the pre-assigned price for this customer. The module calculates sales commission and generate analysis of customers, products and salesmen. It is fully integrated with the Inventory Control module and Accounts Receivable module.

PURCHASE ORDER

Purchase Order module performs the task of purchase order entry, receipt of items and matching of receipts with vendor invoices. It handles the purchase of inventory items as well as non-inventory, third party products. Vendor price history and purchasing history of each item are automatically recorded by the module. You can have multiple receipts for a single purchase order or multiple purchase orders combine into one receipt. Similarly, multiple receipts can be combined into one single vendor invoice or one receipt with multiple vendor invoices.

INVENTORY CONTROL

The Inventory Control module is fully integrated with the Order Entry and Purchase Order modules to provide you with a complete picture of the status of all items at any moment. It is a multi-location inventory management system that handles receipts, issues and stock adjustments resulting either from SparrowPro modules or manual stock movements outside of the system. Manual stock issues and receipts are managed by the Stock Movement Tracking mechanism of the module. Stock card records the movement history of each item in each location while lot history keeps records of each lot. The Inventory module alerts the Order Entry module on stock availability during the order entry process and emails are sent out to inform relevant persons if stock levels fall below the minimum safety levels.

GENERAL LEDGER

The General Ledger is fully integrated with all the other modules. It collects all the financial transactions of the business and generates the trial balance, income statement, balance sheet and budget variance report. It provides for cost centre reporting and bank reconciliation. Financial reports and statements are also directly printed out in excel formats.

ACCOUNTS RECEIVABLE

Accounts Receivable generates cash invoices, credit invoices, credit notes and debit notes. It also processes credit invoices from the Order Entry module. The module keeps track of customer credit limits and prints out customer statements, GST reports and aging reports.

ACCOUNTS PAYABLE

Accounts Payable manages vendor invoices and payment for these invoices. The module automatically combines approved payments of invoices for the same vendor into single cheque payment. It produces GST report and aging reports. Manual issuing of cheques and petty cash claims are also carried out in this module.

PROCUREMENT

Purchases of services, raw materials and non-trade related goods are carried out by the Procurement module. It processes requisitions, generates RFQs and monitor purchases against approved requisitions. This module is fully integrated to Accounts Payable and Projects and Job Costing modules.

PAYROLL

The module calculates payroll and print payslips from timesheets, deduction schemes, contribution schemes, benefits schemes and personal loan schemes. It generates data for tax and government submissions. Staff training records and leave applications are also kept in this module.

GENERAL LEDGER

The General Ledger is fully integrated with all the other modules. It collects all the financial transactions of the business and generates the trial balance, income statement, balance sheet and budget variance report. It provides for cost centre reporting and bank reconciliation. Financial reports and statements are also directly printed out in excel formats.

PROJECT AND JOB COSTING

The module provides a set of tools for tracking and controlling project costs. Labour, material, sub-contracts and miscellaneous costs are gathered automatically from other modules and assigned to the projects.

E-COMMERCE

Sparrow Pro's shopping cart is fully integrated with the Inventory and General Ledger modules. Item status and the General Ledger are updated immediately with every purchase. The shopping cart orders are passed immediately to the Order Entry module for shipment processing.

POS

SparrowPro POS module comes with cash drawer, barcode generating software and customer display. The POS module resides in the server and you can link multiple POS stations running on clients to the server. The POS module is integrated directly to the inventory database and sales and cash receipts are updated immediately to the General Ledger.
